- **Boss mechanics:**
  - Hai-König does a telegraphed charge and is tired and takes extra damage afterwards.
  - Riesenkrake slams marked circles.
  - Meeresungeheuer pulls you in, then fires a ring.
  - Lava-Titan sends a magma wave with gaps.
  - A red arrow points to an off-screen boss, and the old ring volley only joins from a boss's second appearance.
- **Stage mechanics:**
  - Kelpwald has tang patches that slow you.
  - Tiefsee-Graben is dark, but pickups, enemy shots, the boss and Anglerfisch lights stay visible.
  - Vulkanschlucht has telegraphed lava zones.
  - Korallenriff stays harmless.
  - Shots now fly further on big screens.
  - Enemies are no longer deleted in view; at the 70 cap, spawning removes only the farthest off-screen one.
  - Two Schwarm-Freunde pick different targets and push apart.
  - Elektroschlag has about 15% more damage, a slightly faster cooldown and more reach.
  - Achievements pay pearls once (10–200, 810 in total), existing unlocks are paid retroactively, and a toast shows the reward.
  - Level-up screens now survive a reload.
  - Pearls are banked on Neustart and "Neuer Tauchgang".
  - Held keys and multi-touch no longer break movement.
  - Dying on a level-up frame no longer skips Game Over.
  - The revive now pushes enemies away and clears shots.
  - Extra-Leben is renamed Lebenskraft ("nur für diesen Lauf").
  - Added a Schlagkraft passive (+8% damage per level).
- **Level-up cards:** They now show exact numbers, for example "Stufe 2 → 3: Perlen-Bonus 20% → 30% · Chance auf 4. Karte 12% → 18%".
- **Weapons:** Harpune aims where the most enemies line up, and Korallenspeer goes for the strongest enemy in range.
- **Enemies:**
  - New enemy types are introduced over time.
  - Piranhas now come in schools, with a Piranha-Ring event every 100 seconds.
  - Gold-ringed elites show up from minute 3.
- **Performance:**
  - Pickups are culled off-screen and drawn from pre-rendered glow sprites.
  - Far-away orbs are merged, and merging goes aggressive once more than 200 orbs exist.
  - The background dots are drawn in one batch.
  - The HUD only writes when a value changes.
  - Sounds are throttled.

- **Storage warning:** The menu now warns when the browser blocks saving.
- **Area unlocks:** Each boss opens the next area. Existing saves keep all four areas open, new players start with Korallenriff only.
- **Champions (version 3, web and Lite):**
  - From minute 4 a champion appears every 120–150 seconds (never during a boss fight); from minute 15 up to two at once.
  - Each has one trait, two from minute 15: Flink (fast, with dashes), Gepanzert (shell blocks 60% until it cracks), Vampir (heals when it hurts you), Teilend (splits into smaller enemies), Explosiv (bursts after a delay) or Anführer (makes nearby enemies faster and stronger).
  - They have about 8 times the HP, hit 40% harder, are 50% bigger and carry a crown, an aura in the trait colour and a name tag with an HP bar; a toast and a fanfare announce them.
  - A champion drops an XP orb and a chest with 12 times the area's pearl value (Luck applies).
  - Champion bosses from the 3rd boss encounter: one trait, 30% more HP, they start angry in phase 2 and drop a double Boss-Schatz, the heart and a free upgrade card.
  - Two new achievements: Champion-Jäger (25 champions) and Kronenbrecher (a champion boss).
- **Multiplayer, first version (version 3, web only):**
  - New "Online spielen (Beta)" in the menu: private rooms with a 4-letter code for up to 8 players, on a free Cloudflare server (setup guide included).
  - Everyone plays their own run with their own level, XP, weapons, HP and pearls, but on one shared map.
  - You see each other with name tags (level, HP bar, colour ring), arrows point to friends, their bosses and their champions.
  - Your weapons also hit your friends' enemies, and damage crosses in both directions.
  - Names are checked by a bad-word filter on the server; the game reconnects by itself (4 tries).
- **Multiplayer, team play (version 4):**
  - The Hafen: a safe harbour in the middle of every room. You start in it with 5 seconds of protection; enemies and shots stay out, but your weapons rest and no enemies spawn there.
  - Downed instead of Game Over when a friend is near: 20 seconds to be rescued; a friend who stands next to you for 3 seconds brings you back with 30% HP.
  - World bosses and room champions come on a shared schedule near a random player, with a warning and a red arrow; every third world boss is a champion boss. If their player leaves, the nearest friend takes the boss over.
  - Enemies get +50% HP per other player nearby, world bosses +60%.
  - With a friend nearby, pausing and level-ups no longer stop the game: the menu and the level-up cards appear as a bar at the bottom (keys 1–4, or the first card is taken after 15 seconds).
  - 8 quick messages on a wheel (Hallo, Hilfe!, Hierher!, Danke!, Boss!, GG, Champion!, OK) and a player list (Tab).
  - You also see your friends' Blasenring, Schwarm-Freunde and shield; their bubbles block shots on your screen too.
  - Anyone inactive for 5 minutes is taken out of the room.

- **Multiplayer, menus and rooms (version 4):**
  - The menu goes profile first, then Schnellspiel, Raum erstellen or Raum beitreten, then the area; every area shows how many players are in it.
  - Public rooms for up to 24 players per area (a new one opens when full); private rooms for 8.
  - Random names are now "Blobi" plus a number instead of "Blubbi".
  - Online runs are saved every few seconds: after a reload, "Online weiterspielen" brings you back into the same room with your progress (kept for 30 minutes).
  - No messages are sent while you are alone in a room, and the game says so when the server's free daily limit is used up.
- **Multiplayer, loot and PvP (version 5):**
  - Loot and enemies are shared: an enemy drops its loot once and whoever grabs it first gets it. Boss hearts and Boss-Schätze are the exception: every player near the boss gets their own.
  - New PvP mode, chosen on the profile next to COOP: your weapons also hit other players for 30% of their damage (at most 25% of the victim's HP per hit). Nobody can be hit in the Hafen or while downed, and the last player to hit a knocked-out player gets the credit.
  - Rooms only mix players with the same game version, and public rooms are kept apart by mode ("Korallenriff PvP #1").
  - Names can now be up to 13 characters long.
  - Holding the touch stick counts as activity, so phone players are no longer taken out of the room by mistake.
- **Progress and economy (version 5):**
  - Only the normal Blobi is available at the start. The others are unlocked and then bought with pearls: Turbo after the Riesenkrake (700), Panzer after the Meeresungeheuer (1,500), Glücks at level 25 (2,500). Existing saves keep their Blobis.
  - Higher Shop levels are locked in tiers that a boss opens (Riesenkrake, Meeresungeheuer, Lava-Titan), so the deeper areas matter; everything costs 19,235 pearls plus 4,700 for the Blobis.
  - Zweite Chance costs 1,200 pearls, needs the Riesenkrake and is now a button: when you are eliminated the game stops for 10 seconds and offers it.
  - Every boss drops a Boss-Schatz chest (bosses sometimes dropped no pearls before), growing with each appearance and doubled for champion bosses.
  - Späte Flut: from minute 15 new enemies get 22% more HP and 12% more damage per minute, plus extra elite waves.
  - Everyone regenerates 1 HP per minute, even before upgrades.

- **Balance and controls (version 5):**
  - Lava pools now burn enemies too (bosses hardly, the Lava-Titan never).
  - Korallenspeer steers towards its target; Tintenwolke does less percentage damage to bosses and champions; Hai-König's third tier is three faster charges.
  - The Anglerfisch's light in the dark is much dimmer.
  - You can tap an upgrade card while steering with the other finger.
  - Every screen now shows about the same amount of the world, so phones and big monitors play alike; the resolution lowers itself on slow devices.
  - A resumed run keeps its enemies and loot and starts after a 3-second countdown.
  - The fonts are built into the game (no request to Google Fonts), and the in-game Anleitung is rewritten.
- **Graphics (version 5):**
  - Normal enemies and the background keep the simple, minimalist look. The detailed animated art is for champions, bosses and the interactive parts of the world.
  - Bosses have outlines, auras, shadows, blinking, poses for their attacks, an entrance and a short death scene; they are about 10% bigger.
  - Champion bosses are 15% bigger again, with a gold double outline, jewellery on each boss (state crown, diadem, glowing comb, crystal crown), a rune seal, sparks, embers, a shockwave and a floating crown.
  - Lava pools are smooth glowing magma without outlines, kelp patches are dense and swaying, and pickups, chests and shots have their own shapes.
  - The Schwarm-Freund is a small mint-green blob again.
- **Performance (versions 4–5):**
  - Glows are pre-drawn instead of using the slow browser blur.
  - Boss art is redrawn every second frame and its outline is computed at half resolution: normal bosses are about 40% cheaper, a champion boss costs about what a normal boss did before.
  - Fewer messages when friends are far away, paused or in a crowd.
- **Bug fixes (versions 4–5.1):**
  - Friends' Blasenring was invisible on the other screen: fixed.
  - A friend's enemies no longer turn grey when their game is paused or on a level-up screen.
  - A friend's boss had no breathing or blink animation and its champion sparks were missing: fixed.
  - Schwarm-Freund disappearing in the Hafen (version 5.1): the cause could not be reproduced, so the game now heals itself. The fish come along when you enter or leave the Hafen, a lost one reappears at your side with a few bubbles, none hides under your Blobi, and they are back after a rescue or Zweite Chance. This is waiting for your confirmation.

- **Multiplayer, PvP teams (version 6):**
  - PvP is now team Blau against team Rot. New players join the smaller team; in private rooms you can switch teams in the player list while you are in the Hafen.
  - Weapons only hit the other team. Rings, names, arrows and the player list show the team colour.
  - Only teammates can rescue you, so you can no longer revive an enemy.
  - PvP has far fewer enemies: waves are half as big, come 2.2 times less often and there are no Piranha-Rings. To keep levelling, enemies give 2.5 times the XP and a knockout gives 6 XP per level of the knocked-out player.
- **Multiplayer, Leitfisch and Schwarmruf (version 6):**
  - Every room keeps a board of Schwarmpunkte: enemy 1, elite 3, champion 20, boss 50, rescue 15, knockout 30 (60 for knocking out a Leitfisch).
  - The best active player with at least 100 points wears the crown and is the Leitfisch (one per team in PvP). Points survive a reload.
  - Every 3 minutes the Leitfisch can send a Schwarmruf (button or R). The others get 10 seconds to follow (F) or say no (N).
  - Followers ride a fast current to the Leitfisch (1.2–3 seconds, they can't be hit), land with a wave that pushes enemies away and stuns them for 1 second, and get Schwarmgeist: 15% more damage for 30 seconds near the Leitfisch.
  - The HUD shows the Leitfisch, your place and your points (and the team score in PvP), and the player list has a points column.
  - Bosses and champions get stronger when more players come near them later, so a called group can't take a boss scaled for one player.
- **Champions (version 6):** Champions are harder: 12 times the HP (was 8), 1.7 times the damage (was 1.4), 10% faster, and every 3.5 seconds they shoot a fan of 3 shots. Their chest now holds 15 times the area's pearl value (was 12).
- **Fixes (version 6):**
  - "Zum Menü" in the pause menu now saves the run, also online; "Weiterspielen" or "Online weiterspielen" continues it.
  - The menu confirmations are consistent: Neustart always asks (except in the first 3 seconds), Zum Menü doesn't need to because nothing is lost.
  - When both players died, or one died while the other was paused, the boss and every enemy vanished and the next boss said ×4. Now a dying player hands the boss and nearby enemies to a friend, even a paused one, and a room where everyone died starts fresh.
  - Chests that gave nothing: a grab that is too late now says so, a grab that gets no answer leaves the chest on the ground, and the pickup sound only plays when you really get it.
  - The boss bar no longer shows a player's name.
  - An arrow at the screen edge points back to the Hafen, and labels of arrows that point the same way no longer overlap.

- **Sound, touch and smoothness (version 6):**
  - New sound effects: synthesized bubbles, splashes, bells, a horn for the Schwarmruf and a whoosh for the ride, all through a compressor so loud moments don't distort.
  - Multi-touch: buttons react as soon as a finger touches them, another finger takes over steering when the first one lifts, and the bars at the bottom no longer block steering.
  - Smoother on 90 and 120 Hz phones like the Realme 6: when the phone misses frames, the game draws an even half rate instead of stuttering.
- **Name and languages (version 6):**
  - The game is now called "Blobfish Survivors".
  - A DE / EN / UA language toggle sits at the top of the start menu. Everything is translated, including messages, champion names and the online screens, and the Cyrillic font is built in. On the first visit the game follows the browser's language.
- **Multiplayer, PvP free-for-all (version 7):**
  - PvP now has two kinds: "Team gegen Team" (Blau against Rot, as before) and "Jeder gegen jeden" (no teams, everyone is your enemy).
  - In "Jeder gegen jeden" nobody can rescue anyone, and there is no Schwarmruf. The best player still wears the crown, and knocking him out gives 60 points.
  - Public free-for-all rooms are separate, for example "Korallenriff FFA #1", and the online counts show them on their own.
- **Online menus (version 7):**
  - The online menu now goes step by step with only two choices at a time: name and Blobi, then Zusammen (COOP) or Gegeneinander (PvP), then (for PvP) Team gegen Team or Jeder gegen jeden, then Schnellspiel or Mit Freunden, then the area.
  - A bar at the top shows the step ("Schritt 2 von 4"), a line repeats what you already chose, and your last choice is marked "Zuletzt" (first time: COOP is marked "Für den Anfang", Schnellspiel "Empfohlen").
  - Joining with a friend's code is a link on the second screen ("Hier beitreten"), because the room decides the mode.
  - The area button says how many players are waiting there, and a saved online run says how many minutes it still waits for you.
- **In-game display (version 7):**
  - The crowded points line under the room name is now a small card with at most three labelled rows: the team score with a bar (team PvP only), "Platz 2 von 3 · 210 Punkte", and who has the crown or what is needed for it. Tapping the card opens the player list.
  - The room pill only shows the mode, the room and the player count.
  - Nothing overlaps any more: arrows at the screen edge slide apart, their labels go to the free side and keep clear of players at the edge, messages appear just below the top display, and the player list opens below the room pill while the card steps aside.
  - Only the 3 nearest players get an edge arrow (was 5).

- **Menus (version 7):**
  - Every locked achievement shows a progress bar ("37 / 100"), and the top of the screen shows how many of the 12 you have.
  - The game-over screen shows only one hint at a time: rewards waiting, or an upgrade your pearls now pay for (with a button to the shop), or your next goal with its progress bar.
  - The shop shows how many pearls are still missing for an upgrade.
  - The Zweite Chance bar says what you would lose ("Level 12 · 8:40 · 306 Gegner"), and "Aufgeben" is now "Lauf beenden".
  - The sound button in the pause menu shows whether sound is on or off.
  - The instructions are updated in all three languages.
- **Sound (version 7):**
  - A short underwater echo gives the sounds more space.
  - Your hits make a quiet tick, collecting orbs and pearls quickly climbs a scale, and quick kills in a row sound brighter each time.
  - Bosses and champions have a big victory sound, a PvP knockout has its own sting, and buying in the shop jingles.
  - The level-up and chest sounds are fuller, and menu buttons sound softer.
- **Online menu (version 7.1):**
  - "Du hast einen Code von einem Freund?" on the online mode screen is now a dashed card with a "Hier beitreten" button.
- **Online fixes (version 7.2):**
  - PvP hits are fair: other players are shown where they really are (the delay of the connection is measured and made up for), and a hit only counts if the player was really there. Their bubbles now stop when they touch you.
  - In PvP a player who just joined gets as many enemies as a player who has been there for 10 minutes.
  - Pearls and other loot no longer go missing for friends who were a little further away; every game also sends its loot list again every 10 seconds.
- **New bosses (version 7.2):**
  - Every area now has six bosses instead of one (20 new ones, for example Kugelfisch-Kapitän, Tang-Schrat, Vampirkalmar, Feuerfisch-Fürst). The first boss of a run is one of three easier ones, then they come in a shuffled order without repeats.
  - Every boss, including the four old ones, has its own big attack, its own heavy shot, its own salvo and a weak moment where it takes 30 % more damage.
  - New dangers: coral walls with one gap, lanes, a snake ring, being swallowed, a life-draining tether, poison clouds, darkness that hides you, marching soldiers with shields, a duel circle and more.
  - Beating any boss of an area opens the next area and the shop tiers.
  - The Korallenriff is easier: bosses have 20 % less health and damage, longer warnings and fewer helpers; elites and the Piranha-Ring come one minute later.
  - New Boss-Album in the main menu with all 24 bosses, and new achievements for each full area (80–400 pearls) and for all 24 (600).

- **Legenden-Bosse (version 7.2):**
  - Four giant raid bosses (Atollon, Die Tangmutter, Abyssos, Magmaros) for COOP rooms with at least 6 active players, with a 60-second warning and an arena.
  - Each has four phases that need teamwork: splitting up, standing together, staying close, looking away or freeing a friend.
  - Reward: a Legenden-Schatz (10× the boss treasure and two free upgrades), a badge next to your name and two achievements; a failed try still gives a small chest.
- **Accounts (version 7.2):**
  - New "👤 Konto" in the main menu: with a login name and password your progress is saved on the server, and you can continue on any device. Guests play as before.
  - A recovery code is shown once in case you forget your password. Only one device plays at a time; the other can take over with "Hier weiterspielen".
  - In online rooms your account's display name is used.
- **Strategy mode, test (version 7.2):**
  - New "🏰 Strategie (Test)" in the main menu: build your own base with a Muschelburg (levels 1–5), farms, storage, towers and walls, using Korallen and Kristalle.
  - Your Blobi keeps its level and cards; XP can be paid into the Perlentresor to train four kinds of troops that follow you, hold a spot or go where you send them.
  - Waves of sea creatures attack your base every 2.5 minutes, with a boss in every fourth wave. For now the base is saved in this browser only.
- **Strategy base (version 7.3):**
  - The base is three times bigger and measured against the Blobi: the Muschelburg and the Brutstätte are about 11 Blobis wide, the whole base 34 to 49 Blobis across, so you really have to swim around.
  - Every building is now a drawn picture instead of an emoji (the build menu shows them too). Higher levels add trim, banners and gold; damaged buildings show cracks, an upgrade shows scaffolding with a progress bar, a destroyed building turns into rubble.
  - The Brutstätte shows its army: one niche for every place (6 to 22), a glowing egg for every troop and a pulsing one for every troop in training. New troops step out of its gate.
  - Towers and cannons turn towards their target, the Leuchtturm sweeps a light beam, and walls join up with their neighbours.
  - The base has a sand floor and a rope rim with a gate, and the four troop types are four real creatures with a scarf in your colour.
  - Towers, cannons and traps reach twice as far to cover the bigger base, and waves start further away from the base.
- **Bosses and menus (version 7.3):**
  - The 20 new bosses and the four Legenden-Bosse are drawn again in full detail, as detailed as the original four; the Legenden-Bosse are the showpieces (Atollon with a living reef on its back, Die Tangmutter with a glowing heart, Abyssos with a huge veined eye, Magmaros as a lava volcano).
  - Painted icons for the areas and for the resources of the strategy mode, and your chosen Blobi greets you in the main menu.
  - The admin page counts a wrong key only once, so a typo no longer uses up several of the five allowed tries; Enter logs in.

- **Smoother fights, animations, menus (version 7.4):**
  - Normal enemies now move a little: the jellyfish's and octopus's tentacles wave, fins flap, crab claws open and close, sea urchin spikes breathe and the anglerfish's lure swings. Champions keep their own art.
  - Boss fights should no longer freeze or tear the picture: bosses now share their drawing surfaces (about a third of the memory, a much cheaper outline), the HUD no longer blurs the picture behind it, and the picture quality no longer flips back and forth. Pause → "Grafik" switches to simple graphics, and the game does that itself after several freezes.
  - Online: a friend and his enemies now glide even on a bad connection (the buffer grows with the lateness of the messages, jumps are smoothed out). On a simulated bad line a friend stalled in 50 of 252 frames before and in 1 now.
  - Found the real cause of the boss-fight glitch (since the version with the new bosses): lava, sting and slam zones were drawn wrongly while they were still warning, which stopped the drawing of the rest of the picture (enemies, pearls, you) for a second or two and left the picture cut up. Fixed, and a single failing drawing step can no longer ruin the picture anyway. A new test lets all 28 bosses fight in a real browser.
  - Fixed: enemies could be missing for a newcomer in a room after 30 joins; "pearl is gone" notes could hide new pearls of a friend who restarted; the loot list is repeated every 5 s instead of 10 s.
  - The Leitfisch call bar now shows its keys on the buttons (F follows, N says no; R calls as Leitfisch).
  - The main menu fits without a scroll bar: Upgrades, Achievements, Boss Album and Account are four tiles, "How to play" sits next to the sound button, and the menu shrinks on low windows. Scroll bars everywhere are thin and in the game's colours.
  - The /admin page is in English.
- **Strategy troops, enemies in between, account sync (version 7.5):**
  - Your troops no longer stick to the Blobi: they trail behind it, speed up and slow down smoothly and settle around you when you stop.
  - Between the waves a single weak enemy now swims in every 14 to 26 seconds (never more than 2 to 4 at once, no bosses), so the base is not empty in between.
  - Found why upgrades did not travel between devices of one account: an open page only asked the server when it was loaded, a purchase on the device that was not active was thrown away when you took the account over, and a change made right before closing the page (or locking the phone) was never sent. Now an open page fetches the newest save when you come back to it, buying on the other device first loads the account's save, and waiting changes are sent when the page is hidden.

- **Smoother fights, graphics that adapt (version 7.6):**
  - Boss fights, above all the four Legenden-Bosse, should no longer hitch: the boss pictures are now drawn only as fine as the screen shows them and are redrawn far more cheaply (measured without a graphics card: Tangmutter and Magmaros went from over half the frames being slow to almost none).
  - The game now picks its graphics level by itself: six levels from "hoch" to "einfach". If it stutters it lowers the level within a second or two (resolution, boss sharpness, outline, sparks), if it runs smoothly for a while it goes back up, and a computer with plenty of room gets a finer picture and bosses redrawn every frame.
  - Pause menu: "Grafik" now switches between automatisch (default), einfach and hoch. The automatic mode remembers its last level.
  - Fewer drawing steps for enemies, round shots and the bubble ring.
  - Deep-Sea Trench (the dark map): XP crystals, pearls, hearts and chests are now drawn with their real pictures in the dark too, instead of plain coloured balls.
- **Lite (TurboWarp) version 6, part 1 – the version 5 to 7 rules:**
  - Only the normal Blobi is there at the start. Turbo (after the Riesenkrake, 700 pearls), Panzer (after the Meeresungeheuer, 1,500) and Glücks (level 25, 2,500) are unlocked first and then bought with pearls on the character screen (tap the card twice). Existing saves keep their Blobis.
  - Shop: the higher levels are locked behind the bosses of the deeper areas (Riesenkrake, Meeresungeheuer, Lava-Titan), with the new prices (19,235 pearls in total); a locked level says which boss opens it, and "noch N" shows how many pearls are missing.
  - Zweite Chance (1,200 pearls, after the Riesenkrake) is a button now: when your last HP are gone the game stops for 10 seconds and shows what is at stake; press the button (or Space / Enter) to come back with half your HP, or end the run.
  - Every boss drops a Boss-Schatz chest instead of a handful of pearls: 25 / 60 / 110 / 180 pearls by area, +50 % for each earlier appearance, doubled for champion bosses (whose chest also holds the free upgrade card). Pearl drops per area are now 10 % × 1 / 25 % × 1 / 20 % × 2 / 20 % × 3.
  - Late game: from minute 15 the flood rises (new enemies get 22 % more HP and 12 % more damage per minute, waves grow, an elite comes every 30 seconds). Everyone heals 1 HP per minute. Lava burns enemies too (the Lava-Titan is immune).
  - Weapons and bosses: the Korallenspeer steers towards its target and flies through all other enemies, the Tintenwolke does only 40 % to champions, the Hai-König's third tier is three faster charges, and the Anglerfisch's light in the dark is much dimmer.
  - Champions as in version 6: 12 times the HP, 1.7 times the damage, 10 % faster, a fan of 3 shots every 3.5 seconds, and a chest worth 15 times the area's pearl value.
  - Menus: every locked achievement shows a progress bar and "37 / 100", the top shows "x von 12 Erfolgen"; the game-over screen shows one hint at a time (rewards, an upgrade your pearls now pay for with a button to the shop, or your next goal); the pause menu says "Ton: an" or "Ton: aus"; a banner announces the flood; the instructions are updated.

- **Lite (TurboWarp) version 6, part 2 – the boss framework of version 7.2:**
  - Boss order: the first boss of a run is one of three easy bosses of the area, then the bosses come from a shuffled bag without repeats. Beating any boss of an area opens the next area, the shop levels and the Blobis.
  - The Korallenriff is easier: bosses have 20 % less HP and damage, warnings last 0.3 s longer, repeats add only 10 % HP, tier 3 only from the 3rd boss, one helper less, the salvo comes at tier 2, only Flink, Gepanzert and Teilend champions (champion bosses: Flink or Gepanzert, angry from the 4th boss), elites at 4:00 and the Piranha-Ring at 3:00.
  - The four bosses have their own heavy shots and salvos: Hai-König (Kronzahn that stays in the sand as an obstacle, Zahnregen), Riesenkrake (Tintenbombe with a black puddle that hides everything, Saugnapf-Salve with curving shots), Meeresungeheuer (Laternenstrahl that lights the dark, Strömungsring) and Lava-Titan (Lavabrocken with an orange landing circle, Glutfaust).
  - New Boss-Album in the main menu: 24 cards, a shadow until you meet a boss, a gold frame once it is beaten and a crown for a champion boss. Five new achievements: Riff-, Kelp-, Graben- and Vulkan-Album komplett (80 / 150 / 250 / 400) and Bestiarium (600). The achievements now have two pages.

- **Lite (TurboWarp) version 6, part 3 – the 20 new bosses of version 7.2:**
  - Every area now has six bosses. Each one has its own picture, a signature move, a heavy shot, a salvo and a second move, with the numbers, warnings and tiers of the browser game. New attack kinds: marked lanes and burning stripes, a coral wall with a gap, a closing ring made of a serpent's body, wind waves, sticky patches and poison clouds, a curved lance ride, a pull, a shrinking light, a duel circle, lava pools that grow in a heat wave.
  - **Korallenriff:** Kugelfisch-Kapitän (swells up and bursts into a ring of spines, boomerang hat, whistle with a school of piranhas), Korallenwächter (a coral wall with a gap that falls inwards, rolling boulder that breaks, splinter cross, reef spines), Mantarochen (rises as a shadow, dives along a marked lane with a stinging stripe, shadow trap, wing-beat wave), Anemonen-Zwillinge (two bodies, one life bar; crossing dashes, a sticky anemone, a stinging thread between them), Schatzkrabbe (hides among treasure chests: hit the real one; steals loot lying near her and gives it all back when she falls).
  - **Kelpwald:** Giftkugelfisch (like the Kugelfisch, but with poison clouds), Tang-Schrat (sinks into the kelp, bubbles show where it comes up, roots break out under you, copies, grows kelp patches), Seeschlangen-Königin (a body of 12 segments that follows her head; a ring of her body closes round you, escape through the gap), Hummer-General (claw cones, a grab, soldier formations, a shield wall), Seepferdchen-Ritter (a curved lance ride, five small sharks, the Ehrenduell circle).
  - **Tiefsee-Graben:** Panzerassel (armoured in front, soft at the back, rolls and bounces, curls up and sends your shots back), Tiefseelaterne (your light shrinks, false lanterns burst, only one is the lure, a flash blinds whoever looks), Abgrund-Seeschlange (the serpent ring with a wandering gap, a chain of sparks, vanishes and comes up under you), Vampirkalmar (the Lebensband drains your life and heals it, a spiked cloak), Schlinger (swallows you for up to 3 s, spits you out, eats other enemies).
  - **Vulkanschlucht:** Vulkanschildkröte (erupts lava bombs; hurt it enough and it tips over; slides along a lava stripe), Schwefel-Rochen (the Manta's glide with a burning stripe, sulfur rain), Glutqualle (burning threads, links lava pools, heat wave that makes the lava grow), Schlotwurm-Kolonie (five worms with their own HP and one life bar, geysers that blow you away), Feuerfisch-Fürst (double fans of spines, two guards, reborn once from an egg).
  - Simplified compared with the browser game: the twins share one HP pool, the Tang-Schrat comes up at a random spot near you, the Hummer-General's soldiers walk towards you, the Vampirkalmar's cloak makes it immune instead of blocking only the front, lava bombs fall without the flying rock.
- **Lite (TurboWarp) version 6, part 4 – title and phones:**
  - The game is called Blobfish Survivors now (logo, page title, loading screen). Your save keeps working: it still lives under the old name.
  - On phones and tablets TurboWarp's high-quality pen is switched off for a smoother frame rate; on a computer nothing changes. Touch was tested in a phone-sized browser (tap the menus, drag to swim).
  - The instructions describe the boss tricks of all areas; the boss-fight tests of every boss at the three tiers ran clean.
- **Not built in Lite:** mid-run resume, new sounds, enemy idle animations, languages, online play, accounts, the Legenden-Bosse and the strategy mode ("Web now, Lite later"). Strategy mode steps 2–5 (base in the account, shared map, raids, ranking) come later in the web game.
